Summary

Current Applied Informatics student in STU with a solid foundation in C/C++ and Python/Django. Experienced with Docker, Git, and Terminal (Bash/Vim). I bring one year of experience in a corporate environment (Slovak Catholic Charity), where I developed strong professional discipline and a high standard for data integrity and confidentiality. Fluently speak Ukrainian and Russian, B1 level in Slovak and B2 in English. Currently looking for a position in Bratislava or remote.

Education

2024 - 2027 Slovak University of Technology in Bratislava (STU)
2023 - 2024 Technical University of Košice (TUKE)
2023 - 2024 IT School GoIT

Experience

Aug. 2025 - May 2026

Slovak Catholic Charity
Assistant for the project "Long-distance Adoption"

Document flow optimisation: Digitised and systematised project archive data, ensuring quick access to information for the team.

Data management: Controlled the document lifecycle (from scanning and classification to confidential disposal), complying with data security standards.

Information systems: Worked confidently in a corporate environment and with specialised content management software.

Administration and support: Performed operational tasks at the request of management, assisted with project logistics and inventory management, demonstrating flexibility and a willingness to work as part of a team.

Hard Skills

Languages
- Python (Django)
- C/C++
- SQL

Tools
- Git
- Docker
- Terminal(Vim/Bash)

Projects

Medieval War Simulation Terminal-based war simulation engine developed in C. Implemented complex game logic and real-time visualization using the ncurses library.

Maze Game A logic-driven maze game featuring multi-level progression and a scoring system. Working with file I/O operations.

Ball Sort Puzzle / Connect Four Implementation of classic puzzle games focusing on algorithmic efficiency and data structures. Developed modular code for game state validation and user interaction.
